SUMMARY

Experienced PHP developer with a proven track record in transitioning operations to web platforms and optimizing functionality for user-friendly experiences. Proficient in core PHP, Bootstrap, and Laravel, demonstrated through successful projects like TalkTube and a virtual phone line site. Skilled in AI tool development, deploying solutions for RehanLab website. Effective communicator, creating instructional videos and conducting live sessions to enhance user awareness and learning.

SKILLS

Html, CSS, JavaScript
Bootstrap
MySQL
Php Laravel
Linux
Git

EDUCATION

Aptech Learning	2022 - Present
Advanced Diploma In Software Engineering (ADSE)	
C.A.S College For Advanced Studies	2021
Intermidate	

PROFESSIONAL EXPERIENCE

DIDx inc

Dec 2023 - Present

Full Stack Developer

As a web developer, I manage PHP, Slim framework, and Next.js platforms, resolving server-side issues like SSL and database errors. I integrated PayPal and the Bank of America API for real-time balance display, along with handling SIP server configuration and optimization. Additionally, I've improved the frontend user experience by adding new features. My work ensures both backend and frontend stability and performance across the platform.

Rehan Foundation

July 2023 - Nov 2023

Junior Developer

I transitioned a social media incubator from Excel to a web-based platform using core PHP, optimizing TalkTube for seamless user and admin functionality. I initiated the development of a virtual phone line site with a Figma-designed UI and Bootstrap/Laravel frontend, though progress was paused. Additionally, I created and deployed AI tools for RehanLab, developed instructional videos, and conducted live sessions to enhance learning.

Diamond Metal

Feb 2022 - May 2023

Lab Incharge

In my role, I managed comprehensive lab maintenance, including equipment, facilities, and detailed test records. I conducted metallurgical tests with precision, ensuring reliable results, while maintaining equipment calibration for optimal performance. I also enforced strict safety protocols to ensure a secure working environment.

PROJECTS

Vorker

[www.vorker.co](#)

Vorker is an HR website built on the PHP core for both frontend and backend. It features dynamic partner and training videos, allowing users to obtain certificates by completing MCQ's.

Family Tree

[www.khandan.us](#)

Family Tree is a community-based website where users can input and manage their personal details. It allows administrators to add community members, manage user information, and add new users, creating an interactive platform for family connections.

Pet house

[pethousee.netlify.app](#)

PetHouse is a frontend website built for Aptech Vision, showcasing products with descriptions and an Add to Cart feature implemented using JavaScript. It offers a simple and interactive interface for users to browse and select products.
